

Budget-Conscious Marine Support Company Rolls Out Barge Finishing Services

Finalized finishing facility designed with space for an entire barge during the finishing process

Background

Superior Marine is a full-service marine support company founded in 1977. Their services include barge cleaning, general steel fabrication, machine shop devices, repair, and other related services.

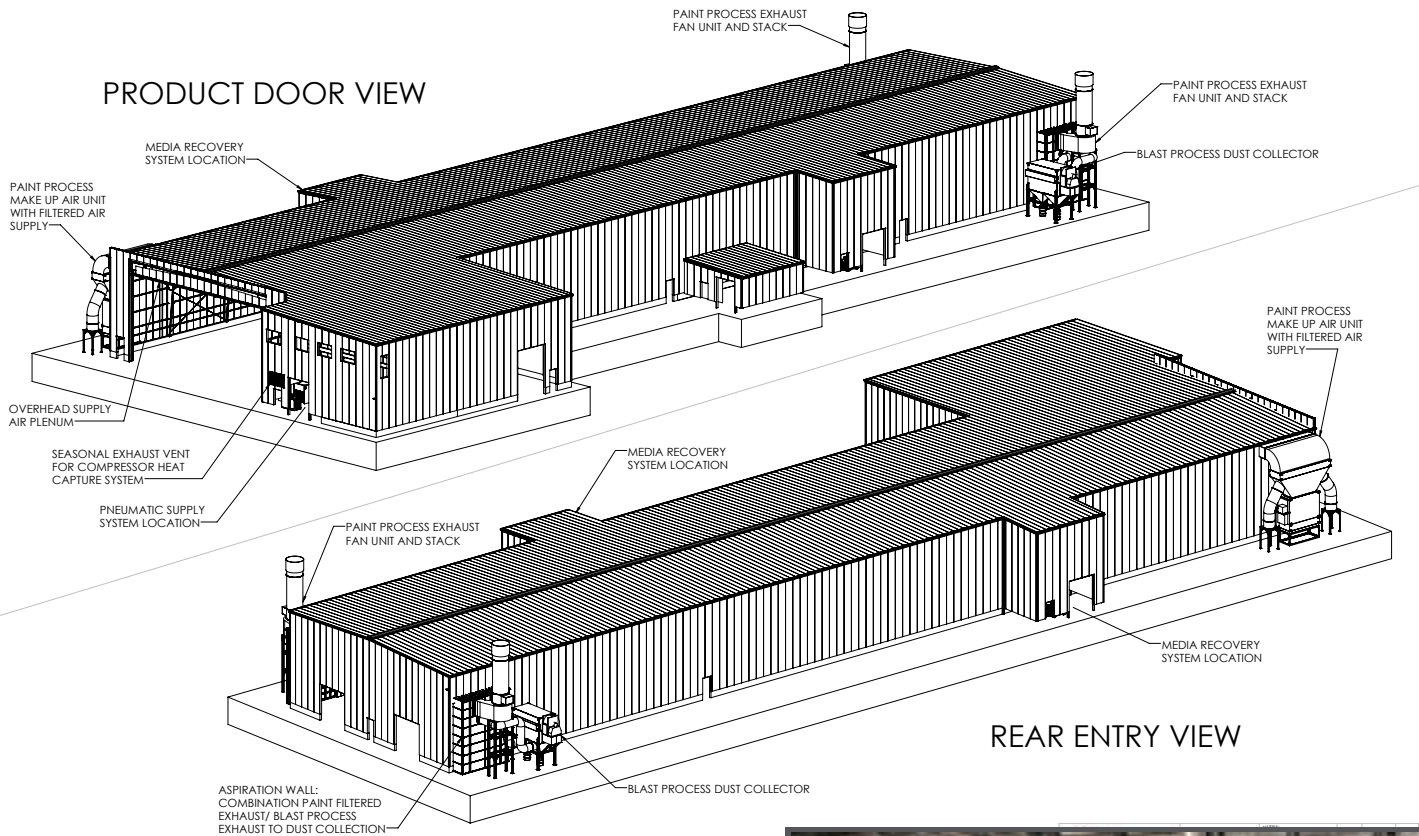

Objectives

Superior Marine wanted to roll out the ability to blast and paint barges indoors as an additional service in their river barge business sector.

Proposal drawing of the all-in-one barge finishing facility

Solution

BlastOne's proposal would give Superior Marine the ability to blast and paint the large barges in the same hall, removing the need to relocate the barges between operations.

The facilities were outfitted to serve both functions to drive down initial costs for the company.

BlastOne's scope included a complete compressed air plant capable of producing 2500CFM at 150PSI

Completed blast and paint hall with directional air nozzles shown

Results

The new facility is now able to blast and paint the largest barges on the Ohio River, in a controlled environment, while incurring low upfront costs to the company.
